☒ Responsive to communication(s) filed on Jun 7, 1999

☐ This action is **FINAL**.

☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11; 453 O.G. 213.

A shortened statutory period for response to this action is set to expire 3 month(s), or thirty days, whichever is longer, from the mailing date of this communication. Failure to respond within the period for response will cause the application to become abandoned. (35 U.S.C. § 133). Extensions of time may be obtained under the provisions of 37 CFR 1.136(a).

Disposition of Claims

☒ Claim(s) 32-48 is/are pending in the application.

Of the above, claim(s) 38-44 is/are withdrawn from consideration.

☐ Claim(s) _____ is/are allowed.

☒ Claim(s) 32-37 and 45-48 is/are rejected.

☐ Claim(s) _____ is/are objected to.

☐ Claims _____ are subject to restriction or election requirement.

Application Papers

☒ See the attached Notice of Draftsperson's Patent Drawing Review, PTO-948.

☐ The drawing(s) filed on _____ is/are objected to by the Examiner.

☐ The proposed drawing correction, filed on _____ is ☐ approved ☐ disapproved.

☐ The specification is objected to by the Examiner.

☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. § 119

☒ Acknowledgement is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d).

☒ All ☐ Some* ☐ None of the CERTIFIED copies of the priority documents have been
☐ received.

☒ received in Application No. (Series Code/Serial Number) 08/271,230.

☐ received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

*Certified copies not received: _____

☐ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. § 119(e).

Attachment(s)

☒ Notice of References Cited, PTO-892

☐ Information Disclosure Statement(s), PTO-1449, Paper No(s). _____

☐ Interview Summary, PTO-413

☒ Notice of Draftsperson's Patent Drawing Review, PTO-948

☐ Notice of Informal Patent Application, PTO-152

--- SEE OFFICE ACTION ON THE FOLLOWING PAGES ---

Art Unit: 2712

DETAILED ACTION

Election/Restriction

1. Applicant's election without traverse of claims 32-37 and 45-48 in Paper No. 6 is acknowledged.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321© may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 32-38 and 45-48 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-2 of U.S. Patent No. 5,719,984 in view of Shimada et al ('772).

Claim 47 of this instant application is broader than claim 1 of U.S. Patent No. 5,719,984 and encompass claim 1 of of U.S. Patent No. 5,719,984.

Art Unit: 2712

Claims 1-2 of U.S. Patent No. 5,719,984 discloses all the features of the instant claimed invention except for providing reproducing means for reproducing the image information signal, the first identification information signal and/or the second identification information signal from the recording medium as recited in claims 32 and 45 of this instant application; a reproducing heads which reproduces the data signals from the recording medium as recited in claim 34; wherein the reproducing means is arranged to reproduce the video signal together with a plurality of data signals as recited in claim 36; wherein the data signal converting and supplying means is arranged to mix the character signals with the reproduced video signal and to supply the monitor with a mixture signal thus obtained as recited in claim 37; and wherein the discriminating means reads out a check code recorded with the ID data and performs judgement on the basis of the check code as recited in claim 48.

Shimada et al discloses an apparatus for recording additional video signal having reproducing means (A and B of Fig. 1) for reproducing the image information signal, the first identification information signal and/or the second identification information signal from the recording medium; a reproducing heads (A and B of Fig. 1) which reproduces the data signals from the recording medium; wherein the reproducing means is arranged to reproduce the video signal together with a plurality of data signals (column 5); wherein the data signal converting and supplying means is arranged to mix the character signals with the reproduced video signal and to supply the monitor with a mixture signal thus obtained (20 of Fig. 1); and wherein the

Art Unit: 2712

discriminating means reads out a check code recorded with the ID data and performs judgement of the basis of the check code (14 of Fig. 1).

It would have been obvious to one of ordinary skill in the art at the time of the invention to provide claims 1-2 of U.S. Patent No. 5,719,984 with reproducing means (A and B of Fig. 1) for reproducing the image information signal, the first identification information signal and/or the second identification information signal from the recording medium; a reproducing heads (A and B of Fig. 1) which reproduces the data signals from the recording medium; wherein the reproducing means is arranged to reproduce the video signal together with a plurality of data signals (column 5); wherein the data signal converting and supplying means is arranged to mix the character signals with the reproduced video signal and to supply the monitor with a mixture signal thus obtained (20 of Fig. 1); and wherein the discriminating means reads out a check code recorded with the ID data and performs judgement of the basis of the check code (14 of Fig. 1) as taught in Shimada et al in order to simplify superimposing characters on the video signal in recording and reproducing modes.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2712

5. Claims 32-37 and 45-48 are rejected under 35 U.S.C. 102(b) as being anticipated by Shimada et al ('722).

Shimada et al discloses an apparatus for recording additional video signal having reproducing means (A and B of Fig. 1) for reproducing the image information signal, the first identification information signal and/or the second identification information signal from the recording medium; inputting means (8 of Fig. 1) for receiving the image information signal, the first identification information signal and/or the second identification information signal reproduced by the reproducing means; display means (28 of Fig. 1) for displaying an image corresponding to the signal received by the input means; control means (18 and 21 of Fig. 1) for controlling a display action of the display means to change, on a display means, a displaying position of a character image corresponding to the first identification information signal is received alone or together with the second identification information signal by the input means as recited in claim as recited in claim 45; wherein each of the first identification information signal and the second identification information signal is code data corresponds to one of the plurality of kinds of information including those in the year, month, day and the hour, minute, second corresponding to the image information signal (column 6, lines 1-14) as recited in claim 46; means (16 of Fig. 1) for judging whether the ID data recorded on the ID data recording area is effective or null; controlling means (18 and 21 of Fig. 1) for controlling display of the ID data on the basis of a judgement result of the judging means as recited in claim 47; wherein the discriminating means reads out a check code recorded with the ID data and performs judgement on the basis of

Art Unit: 2712

the check code (14 of Fig. 1) as recited in claim 48; reproducing means (A and B of Fig. 1) for reproducing the data signals from the recording means; display mode setting means (column 5, lines 54-63) for controlling an amount of the data signals to be displayed and having at least first and second modes involving respective different display amounts; data signal converting and supplying means (10, 19-20, and 29 of Fig. 1) for converting the data signal reproduced by the reproducing means into character signal and for supplying the character signals to a monitor, the data signal converting and supplying means being controlled by the display mode setting means to supply the character signals to the monitor in the respective different display amount as recited in claim 32; wherein the recording means is a recording medium (T of Fig. 1) as recited in claim 33; wherein the reproducing means includes a reproducing heads which reproduces the data signals from the recording medium (A and B of Fig. 1) as recited in claim 34; wherein the data signal converting and supplying means is arranged to effect display in respective different display position (column 6, lines 1-14) as recited in claim 35; wherein a video signal is recorded on the recording means together with the plurality of data signals (columns 5-6); wherein the reproducing means is arranged to reproduce the video signal together with the data signals (column 5) as recited in claim 36; and wherein the data signal converting and supplying means is arranged to mix the character signals with the reproduced video signal and to supply the monitor with a mixture signal thus obtained (20 of Fig. 1) as recited in claim 37.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2712

The cited references relate to an apparatus for recording/reproducing apparatus for recording/reproducing video and additional information.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thai Tran whose telephone number is (703) 305-4725.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks
Washington, D.C. 20231

or faxed to:

(703) 308-9051, (for formal communication intended for entry)

or:

(703) 308-5359, (for informal or draft communications, please label
"PROPOSED" or "DRAFT")

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive,
Arlington, VA., Sixth Floor (Receptionist).
